DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

- Group I, claims 7 and 8, drawn to a **process** (method for discriminating between nuclear fuels based on their individual compositions).
- Group II, claims 9-12, drawn to an **apparatus** (device for discriminating between nuclear fuels based on their individual compositions).

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: In the instant case, the device can be used to verify the declared exposure, cooling time and fissile material content of a nuclear fuel assembly.

2. Upon election of Group II - This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- IIA Wherein the geometries of the front and rear collimators for the gamma detector are as shown in Fig. 3.
- IIB Wherein the geometries of the front and rear collimators for the gamma detector are as shown in Fig. 6.

3. Upon election of Group II and either IIA or IIB: - This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

- Ila Wherein the casing consists of a single envelope (see Fig. 2)
- IIB Wherein the casing consists of two concentric envelopes (see Fig. 7)

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

4. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Species IIA and IIB lack the same technical feature due to the selection of alternative configurations for the front and rear collimators of the gamma detector.

Species IIa and IIb lack the same technical feature due to the selection of alternative designs for the casing.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined (e.g., II, IIA and IIa) even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon cancellation of claims to the non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by petition under 37 CFR 1.48(b) and by fee required under 37 CFR 1.17 (i).
